

Why is coding Hard?

Why is coding hard?

Because you need to learn a lot of things to do it

Why do we need to do it?

Because it gives us the ability to create things

Why do we need to create things?

Because it makes us valued members of the community

Why do we need to be valued members?

Because it gives us a sense of purpose

Why does it give us purpose?

Because it allows us to make better relationships with the people around us

Why do we need to form relationships with people to feel valued?

We can form relationships with pets too

Why do people like having pets?

Because it keeps them company

Why do people need company?

Because they don't like being alone

Why do they hate being alone?

Because they feel lonely

Why is feeling lonely bad?

Because people need to form relationships

Final results:

After asking a series of why's, I went from asking why coding is hard to asking about the need for relationships. This reminded me of the movie cast away, where the need for company pushed the main character to become friends with a volley ball. So I drew a representation of that scene, where a guy is sitting on an island with only a coconut as company.

The image was drawn using procreate, where some elements were traced into the image and others were drawn using different brushes and stamps provided in the software.
